

## Up, Up, and Away!

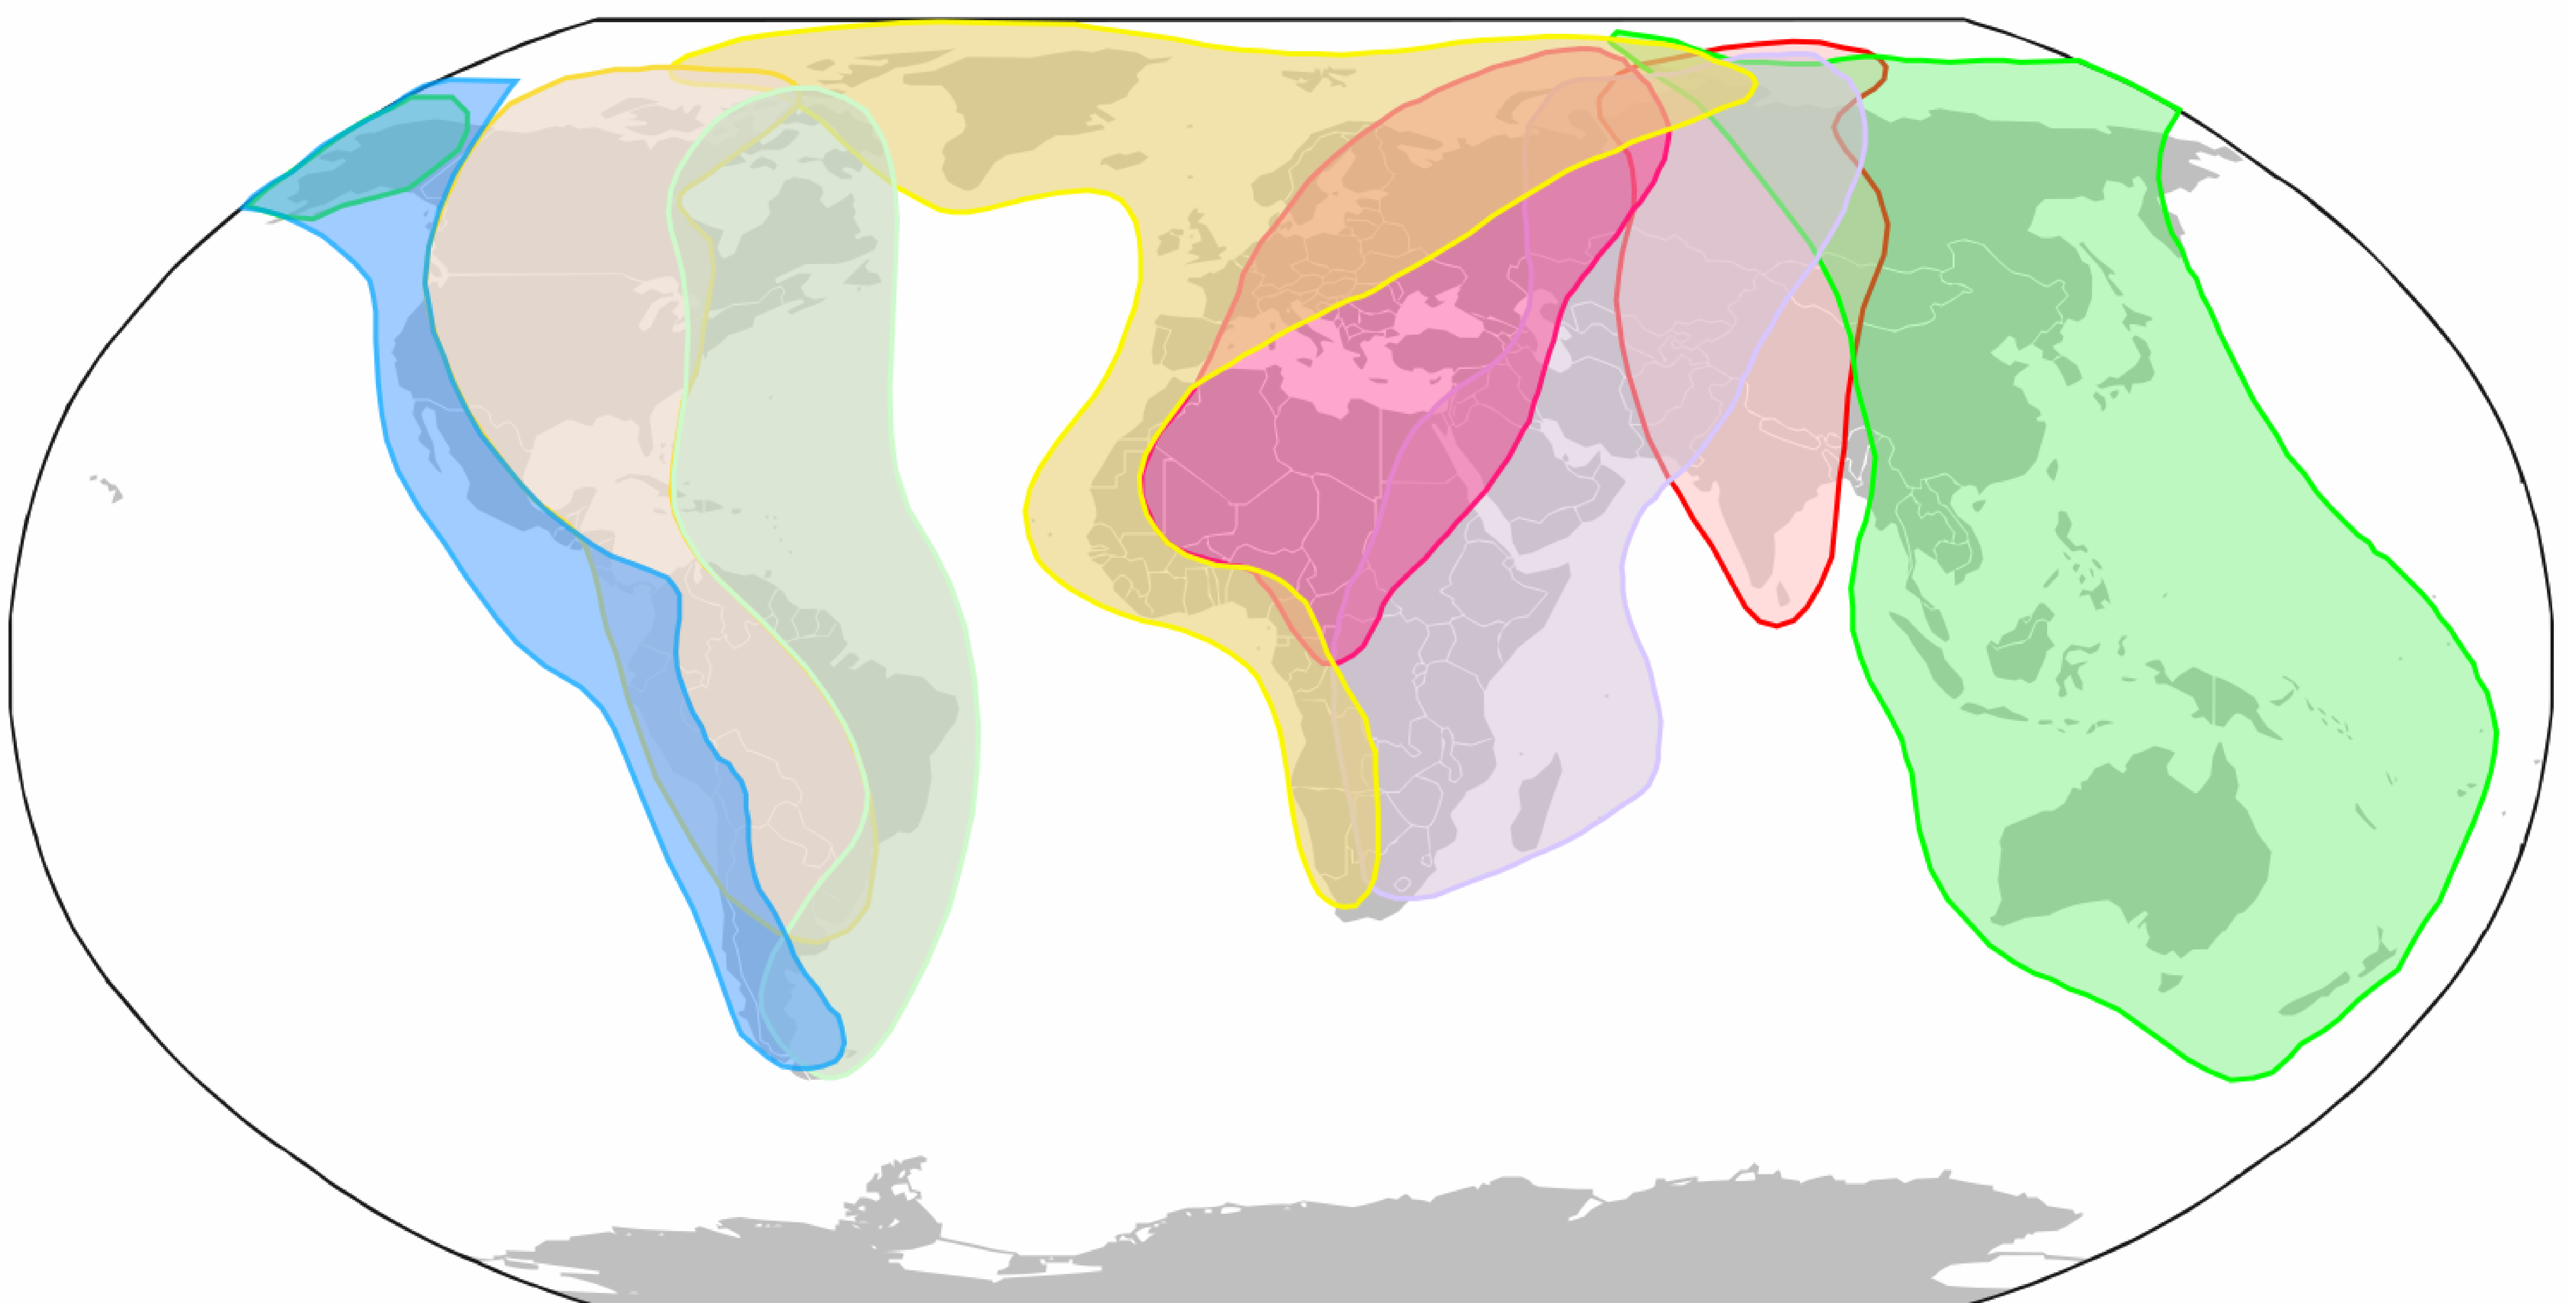

Prothonotary Warblers migrate to Congaree in the spring.

Not all birds migrate but those that do travel along paths often referred to as flyways. Migration routes vary in distance depending on the species but they have one thing in common... They are always flying between their wintering and breeding grounds. Did you know the Arctic Tern has the longest migration of any bird? They winter in Antarctica and fly to their breeding grounds in the Arctic every year.
